

Menu.js

```
const {kalkulator} = require("./rumus.js");
const readline = require ("readline");

const inputUser = readline.createInterface({
  input: process.stdin,
  output: process.stdout
});

inputUser.question("Masukkan angka pertama:" , (angka1) => {
  inputUser.question("Masukkan angka kedua:", (angka2) => {
    inputUser.question("Masukkan operator (+, -, *, /):", (operator) => {

      const hasil = kalkulator(
        parseFloat(angka1),
        parseFloat(angka2),
        operator
      );

      console.log(`Hasil: ${hasil}`);
      inputUser.close()
    });
  });
});
```

rumus.js

```
module.exports = { kalkulator };

function kalkulator(a,b, operator){
  let hasil

  switch(operator){
    case '+':
      hasil = a + b;
      break;
    case '-':
      hasil = a - b;
      break;
    case '*':
      hasil = a * b;
      break;
    case '/':
      hasil = a / b;
      break;
    default:
      console.log('operator salah')
  }
  return hasil;
}
```
